

# GA35 GPS Antenna relocation on AS 350 B3

## Description:

This certified modification enables the relocation of the existing Garmin GA35 GPS antenna on Airbus H125 (AS350 B3e) rotorcraft.

The antenna, initially installed on top of the vertical fin, is repositioned to the cabin roof to comply with Garmin's installation **requirements for the GFC 600H autopilot system**. This new location ensures **optimal GPS signal quality** and **full compatibility with autopilot performance criteria**.

To maintain the aircraft's structural integrity and appearance, the previous antenna location is covered with a custom-designed, sealed, and aerodynamically clean fairing.

Original position

New position

## Key benefits:

The installation kit includes all necessary components and is delivered with **EASA form 1**.

OEM-Recognized : **Officially labeled by Airbus Helicopters** for guaranteed design quality and full compatibility.

Autopilot Compatibility: GPS antenna repositioned for **full compliance with Garmin GFC 600H** installation requirements.
